EDUCATION

Bachelor of Science, Computer Science, May 2026

The University of Alabama, Tuscaloosa, AL

GPA:3.35/4.00

Technical Skills: C++, C, C#, Swift, Java, Python, Pandas, Docker, Linux, Flask, FastAPI, Git, Html/CSS, JavaScript, React, React Native, Node.js, Kali, Unity, Pytorch, SQL, MongoDB, ROS2, Gazebo

Certifications: CompTIA A+, CompTIA Security+

EXPERIENCE

Engineering Co-Op-It Engineer, Phifer Incorporated Tuscaloosa, AL, May 2023 - Present

- Maintained security patching and OS updates for 1000+ workstations, achieving 95% compliance and reduce vulnerability exposure across the network.
- Performed migration of 500+ mailboxes from Microsoft Exchange 2013 to Microsoft Exchange 2019 improving reliability and reducing support tickets by 10%.
- Configure and manage the organization's file server, including setting permissions and optimizing access protocols.
- Resolved 10-20+ IT tickets weekly with <24-hour resolution time, minimizing downtime in plant operations.
- Managed and verified backup systems to ensure data integrity, availability, and recovery readiness across critical infrastructure.
- Implemented remote-site connectivity using site-to-site VPNs and deployed Starlink failover to provide continuous access during network outages.
- Debugged and tested software systems using logging, unit testing, and iterative validation to ensure correctness and reliability.
- Built Python monitoring scripts to collect system and network metrics, and support proactive troubleshooting.
- Researched and proposed cost-effective software and hardware solutions for line production increasing employee productivity by 30%.
- Performed installations, configurations, and maintenance of computer systems and applications.
- Managed and maintained the Phifer.com website, overseeing content updates, accuracy, and site reliability.

Wheeled Vehicle Mechanic, National Guard Army, Tallassee, AL, Mar 2019 - Present

- Ensure all Army vehicles are fueled and capable of accomplishing a mission.
- Read technical documentation to complete accurate repairs.
- Diagnose and repair brake, exhaust, electric, and other critical systems.
- Undertaken comprehensive testing to assure vehicles are safe to drive and accomplish missions.

RELEVANT PROJECTS

- Kayne Quotes app - Python.
- Built a python Tkinter GUI that fetches and displays random quotes from a REST API using HTTP request.
- Lisp Interpreter - C++.
- Designed and implemented a C++ Lisp Interpreter with support for s-expressions, scoped evaluation, conditionals, lambdas, and user defined functions.
- Fitagochi – React Native, Fast API, Python, SQLite.
- Developed a React Native fitness app with a FastAPI backend and SQLite database leveraging gamification to promote workout consistency.
- Zombie Slayer - Unity, C#.
- Created a Unity based top-down shooter featuring wave-based zombie AI, combat mechanics, and survival gameplay.
- MNIST Digit Classifier- Python, Pytorch, Matsplotlib, torchvision.
- Implemented and trained a convolutional neural network in PyTorch, focusing on data preprocessing pipeline, model evaluation, and performance optimization.
